## Introduction

This project for the west elevation window and stonework represents a continuation of the work that we are completed to the north elevation in 2012 and to the South elevation in 2014. The works in the current project are more or less as anticipated and specified, but with some variation in the type and extent of the stone works necessary. The scaffolding is now erected and the windows have been removed for re-leading to the stained glass studios. Stone repairs and re-pointing are proceeding.
